

Powerful tool (Flex-Box) ^{lecture 20}
 ① Flex-Box
 ② Grids

→ 1D layout

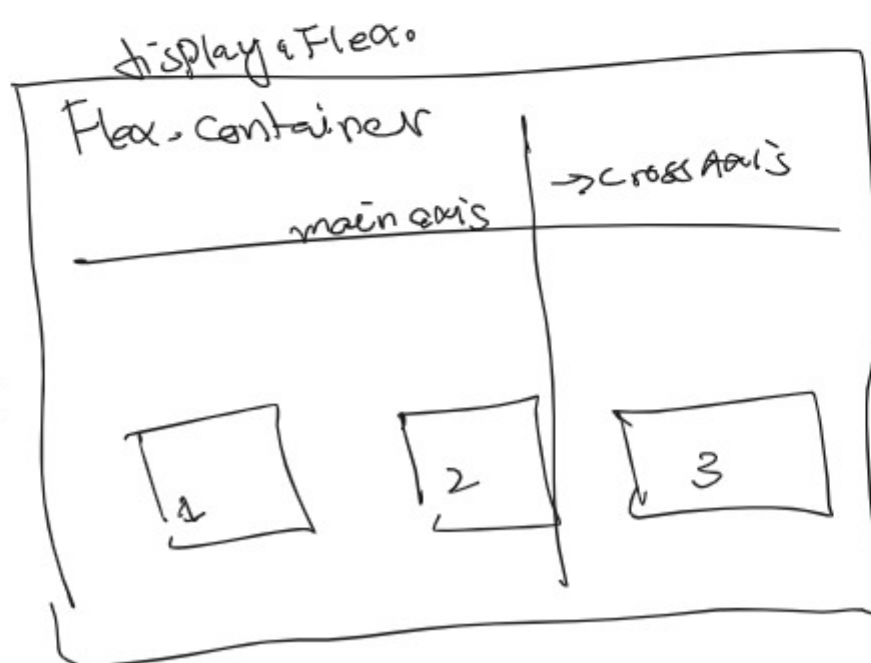

→ Flexible box.
 Q: What is Flexbox?
 Q: 1D-Dimension → align items in row and columns.

Flex
 Parent Container
 contain Flex-Item

Rules.

- ① Create Parent Container.
- ② Then inside other containers
- ③ parent display property
- ④ inside parent all div

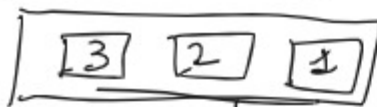

④ By default
 Flex-Direction
 is row.

Flex-direction: row
 row, reverse

→ Flex-Direction row reverse.

→ parent:
 Flex-items.

② (Flex-wrap) → Suppose less word in line.
 but I want after 10 words new line should format.

(How to use flex-wrap?)

Flex-wrap: wrap;

→ By Default no wrap.
 → Wrap-reverse.

9 (justify Content)

② (justify Content) → Property

→ Main axis according to cheez

to change layout

if flex-direction "row" → main axis horizontal.
 if flex-direction "column" → main axis vertical.

start
 center
 end
 space around
 space evenly
 gap between

(Flex-item) ① → order → as greater order
 in negative value as came first in the sequence.

② flex shrink

③ flex-grow

flex-wrap: none;

⑤ flex-basis

Dimension set kary
 k karm ata hai

Jab box-chota hai
 to use squeeze hata
 use shrink property.
 ho n.

Jab box bada hoga
 to use grow hata
 use grow property.
 hoga.
